

IN THE CLAIMS

Please amend the claims as follows:

1. (Canceled)

2. (Canceled)

3. (Canceled)

4. (Canceled)

5. (Canceled)

6. (Canceled)

7. (Canceled)

8. (Canceled)

9. (Currently Amended) A liquid crystal display device comprising:

a ~~light generator~~ plurality of lamps that generates light;

an image display unit that receives the light to display an image using

liquid crystal;

a light guide plate that guides the light to ~~an~~ the image display unit;

a receiving member that receives the ~~light generator~~ lamps and the light guide plate;

a power supply mounted in the receiving member, the power supply supplying power to the ~~light generator~~ lamps;

a plurality of power supply lines that supplies the power to the ~~light generator, which~~ and electrically connects the power supply to the ~~light generator~~ lamps, the plurality of the power supply lines including at least two first power supply lines that supplies a high voltage to the lamps and at least two second power supply lines that supplies a low voltage to the lamps; and

a first leakage reduction member ~~mounted on the plurality of~~ wrapping around the first power supply lines, ~~the first leakage reduction member reducing so as to reduce~~ the power from being leaked from the first power supply lines.

10. (Currently Amended) The liquid crystal display device of claim 9, wherein the first leakage reduction member provides spacing to the power supply lines so that the first and second power supply lines are spaced apart from ~~one another~~ each other.

11. (Canceled)

12. (Canceled)

13. (Canceled)

14. (Canceled)

15. (Currently Amended) The liquid crystal display device of claim 14 9, wherein the two first power supply lines are coated with the first leakage reduction member to be spaced apart from each other and the two second power supply lines are coated with a second leakage reduction member.

16. (Previously Presented) The liquid crystal display device of claim 15, wherein the first leakage reduction member and the second leakage reduction member are partially coated on an exposed portion of the power supply lines out of the receiving member.

17. (Previously Presented) The liquid crystal display device of claim 9, further comprising a fixing member that fixes the plurality of the power supply lines to the receiving member to prevent the power supply lines from being separated from the receiving member while guiding the plurality of the power supply lines having the first leakage reduction member to the power supply on the receiving member.

18. (Previously Presented) The liquid crystal display device of claim 17, wherein the first leakage reduction member has a connection member formed at a predetermined

portion of the first leakage reduction member to connect the power supply lines to the fixing member.

19. (Canceled)

20. (Canceled)

21. (Canceled)

22. (Canceled)

23. (Currently Amended) The liquid crystal display device of claim 9, wherein the receiving member ~~that receives~~ receiving the ~~light generator~~ lamps comprises a mold frame, the mold frame having at least a portion that receives at least one circuit element of the liquid crystal display device.

24. (Previously Presented) The liquid crystal display device of claim 23, wherein the portion comprises a space that receives the at least one circuit element.
